TECHNOLOGY GROUP

Our Team

Our team of consultants hold **the highest standards of industry certifications** to support our clients. They include: CCIE (in many areas), CISSP, PCNSE, VCP, NSE, MCSE, GCP, Azure, AWS, GSEC, CISA, CSA, etc.

Our Solution

Protecting digital infrastructure requires **24/7 cybersecurity monitoring and detection capabilities**. The Mayfield Security Operations Center (vSOC) Service enables detection and prevention of cyber threats and attacks in a customer's ICT environment. Mayfield vSOC Service capabilities detect cybersecurity events and incidents, respond to incidents, manage cyber threats and vulnerabilities, and manage information security systems.
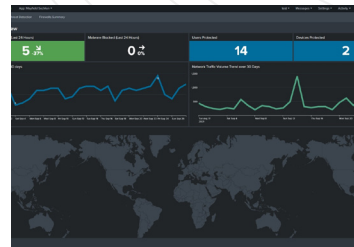

Benefits for Clients

We help customers integrate leading security solutions with expertise and established standards. We provide 24/7 monitoring and detection with a minimized response time. This leads to faster business continuity and decreased image and reputation risks.

No Hardware or Software Required	Visibility	Integration with Threat Intelligence

Competitive Advantage

Our highskilled SOC experts help customers identify, prevent and resolve cybersecurity events and disruptions quickly and efficiently, thereby ensuring business continuity and system recovery. The Mayfield vSOC service is made up of skilled personnel, efficient and appropriate processes and procedures, and modern cybersecurity technology. We also provide additional cybersecurity services, such as firewall management and network security design/architecture.

- High skilled and experienced security analysts (min. 7 years' experience)
- Certified with industry leading certificates

Partners

Mayfield has established partnership with Cisco, Palo Alto Networks, Dell, Proofpoint, and various other technology providers to resell their hardware and services.

Mayfield is also a preferred integration partner for Kyndryl, IBM, Insight, Telus, TechData, and more.
