DIGITAL MIGRATION AND ADOPTION ADVISORY SERVICES

The Jaeger Consulting Group Difference

At Jaeger Consulting Group we know that great tactics mean nothing if they're not aligned with vision, strategy and goals that create the right outcomes. As a consulting firm focused on SME growth, all of our client work begins with the identification and/or refinement of the business vision so that the digital migrations/adoptions recommended are on the critical path to achieving that vision. Important elements such as target customers and the business' unique value proposition, for example, are critical to ensuring the right solutions and configurations to create outcomes that aren't just improvements, but what are precisely right for your unique business.
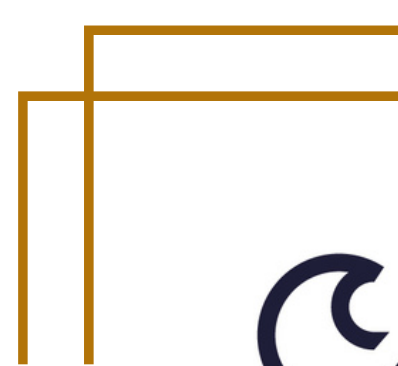

We are Agile framework specialists and focus on high business impact solutions that can be implemented quickly and can be improved and iterated for scale. We have worked with highly change-oriented Agile organizations as well as more process-oriented and regulated ISO 9001 organizations (including those who work with/for secure, Federal projects with many obligations).

In short: we adapt to your organizations needs and help identify solutions which do the same.

SME Integrated Business Operations Focus

To support scalability, we focus on the business operating system itself - that is the critical systems and interactions that contribute within and across key business areas (marketing and sales, operations and operational planning, human resources and finance) as well as solutions which support and integrate across business areas (ex: CRMs, Dashboarding/Reporting, Collaboration, Project and Task Management, etc.). We are proud to have served diverse client sectors, such as retail, e-commerce, professional services, construction/trade, engineering (and others).
